1. Login to your router’s configuration page by entering the default IP address (192.168.0.1) in your web browser.

2. Enter admin as your default Username and Password, and then click on the Login button.
Website Filtering

*Use this feature to deny (block) or allow access to specific websites.*

1. Click on **URL Filter** under the Security tab on the home page then check the **Enable** box to turn on this feature.
2. Configure the URL filter according to your requirement.

   a. Identify the **mode** of your choice: Discard (block) or Permit (allow) access to up to 10 websites.

   b. Enter the **URL Address** of the website(s) you want to Discard or Permit then click on the **Add** button.

   Parental controls are now enabled on the URL Address(es) you have added.
Securing Your Settings

1. To prevent other users from making changes to/accessing your router, click on User Management under the Administration tab on the home page.

2. Enter your desired password then click on the Submit button. Your router may need to reboot.

Important: This password will replace the default password you used to log in to your router settings (step 2 on page 1) so be sure to remember it!
