

TIME CLOUD INTERCONNECT DIRECT FOR MICROSOFT EXPRESSROUTE

Storing your data in the cloud helps you reduce costs and improves the scalability, flexibility and mobility of your business. However, accessing the cloud over an unreliable public Internet connection diminishes those benefits. A private connection to your cloud greatly enhances your ability to take full advantage of cloud services.

TIME Cloud Interconnect Direct for Microsoft ExpressRoute is a dedicated connection between your facility and the Microsoft ExpressRoute network, which bypasses the Internet to ensure private, secure access to Microsoft Azure. It can be deployed rapidly due to the pre-existing infrastructure and feels like a seamless extension of your own network.

This specialised connection is offered from any TIME-ready building in Malaysia. It allows you to enjoy the full scope of Microsoft Azure's robust cloud services without worrying about latency, security or reliability.

KEY FEATURES

Trusted Cloud Gateways

TIME and AIMS are the trusted cloud gateways to connect to Microsoft cloud services for enterprises in Malaysia.

Fast & Reliable

Fast, reliable connectivity for easy access to Microsoft cloud services. Feels like a seamless extension of your own network.

Secure

Dedicated private network ensures security when accessing Microsoft cloud services.

Quick Delivery

TIME can build upon existing infrastructure to rapidly connect enterprises to Microsoft cloud services.
